

Methodes, functies en constanten

Opmerkingen:

- Parameters tussen vierkante haken zijn optioneel en kan je dus achterwege laten. Hetgeen achterwege wordt gelaten, wordt automatisch ingevuld door Python met standaardwaarden. Start met weglaten vanaf de binnenste vierkante haken.

De notatie `find(sub:str [, start:int [, end:int]])` stelt dus drie mogelijke vormen voor:

`find(sub:str, start:int, end:int)`

`find(sub:str, start:int)`

`find(sub:str)`

- Type hinting is niet toegevoegd indien er meerdere mogelijkheden zijn.

Python	
functies	<pre>abs(x) -> int of float input([prompt]) -> str open(name:str [, mode:str]) -> file print(*object [, end=...] [, file=...]) -> None type(object) -> type bool(x) -> bool float(x) -> float int(x) -> int str(x) -> str list(iterable) -> list tuple(iterable) -> tuple ord(c:str) -> int chr(i:int) -> str len(object) -> int round(x [, ndigits:int]) -> int of float range(stop:int) -> range range(start:int, stop:int [, step:int]) -> range min(iterable [, key]) -> int of float of ... max(iterable [, key]) -> int of float of ... sum(iterable [, key]) -> int of float enumerate(iterable [, start:int]) -> enumerate sorted(iterable [, reverse=True]) -> list</pre>
